

TFC Steering Committee Notes

October 24th

Attendees: Glen, Ben, Joanna, Olivier, Paul, Dave, Bence

Minutes:

- Infrastructure
 - When do we remove the two additional servers? Keeping them to the end of the year, they are needed for November, but they are a monthly subscription.
 - Existing Flexnet licenses, waiting to get the new licenses - need licenses with an earlier date.
 - Windows Builds
 - These are currently set up on Stage. The jobs will be running on the Nightly builds.
 - We should wait on this till after the releases, as migrating from stage to production would impact the servers.

- TrustedFirmware.org
 - Errors w/ TF-A LTS Project (<https://www.trustedfirmware.org/projects/tf-a/tf-a-lts/>)
 - Check with Don about the new Astro system.
 - Ben created a marketing ticket for the Website problem.

- MBedTLS
 - Any Issues? No. They had a release with no issues.

- Olivier
 - <https://linaro.atlassian.net/browse/TFC-521> Create a hafnium-developers group

- LTS
 - TFC-510 TF-A LTS: Patch Monitoring/Triaging
 - TFC-471 TF-A LTS: Request for the script to generate an email for the LTS release announcement

- Arthur is investigating IAR compiler support
 - A meeting is scheduled for Wednesday to discuss implementation and estimates.
 - The MbedTLS team is looking forward to this functionality back in.

- Paul's priority is to work on UBL licenses and clean up old compilers and some of the build scripts.
 - Seeing that in MbedTLS, they are using older versions of compilers, they would need to support 6.18.
 - Suggesting dropping support 5.x and 6.6
 - Paul to follow up with the Dave Rodgman and Bence Szepekuti .
